### **New Mammoth® Space Saving, Low Sound Condominium Heat Pump**

Chaska, MN (January 5, 2007) — When you find time to relax in your home environment, the last thing you need is a distracting sound from your air conditioning system. Out of sight and out of mind are the guiding principles Mammoth followed in the development of an ultra-quiet, water-source heat pump.

High-rise condominium and apartment owners are beating a path to Mammoth's doorsteps to take advantage of the space saving cabinet design, and low sound levels, of its 1 to 5-ton model MCHH water-source heat pump line. Often installed in a closet space, these heating and cooling units have one of the smallest footprints on the market. Smooth running scroll compressors, insulated cabinet, sound barriers, and hydronic heat, add to the quietness of operation. Certified tests to the ASTM 1574-98, **Measurement of Sound in Residential Spaces**, standard have shown sound levels less than NC 35 in the living space.

Learn more about Mammoth water-source heat pump solutions by contacting a Mammoth professional sales representative. To find the nearest sales representative, visit [www.mammoth-inc.com](http://www.mammoth-inc.com).

Mammoth, Inc. is a CES Group™ company. The companies that comprise CES Group™ are some of the world's leading custom-engineered air conditioning manufacturers, offering a full range of products, from 1/2 to 2,000+ tons and 300 to 400,000+ cfm. The CES Group can provide innovative, cost-effective, custom-engineered solutions for today's most challenging HVAC applications.
